

And she didn't want to take  
 medicine, and he didn't know how to  
 give it without perhaps force, and he  
~~thought~~ it best not to undertake it.  
 That was the substance of what  
 he said. I don't say it was in  
 that language. That is the substance  
 of the language just as near as I  
 can recollect it. But I had to reply  
 to it, "Why, no, you ought to know.  
 I bring my patient here for you  
 because I don't know how, and you  
 ought to know how."

Ques Did Dr. Bulow at that time or  
 any other say that it didn't make  
 any difference because she was going to  
 die any way? Ans No, I don't think  
 he ever used that language.
